

OPERATIONAL REPORTING AND BI

TO POWER PEOPLE...

INFOSYNC[®]

Comprehensive Business Process Solutions[®]

Many business leaders rely on data to make strategic decisions and drive growth. But obtaining this data is tedious and time-consuming. Our operational reporting and BI feature timely data in reports specific to your needs so you can identify opportunities, track progress, and measure your success with ease.

OPERATIONAL REPORTING SOLUTIONS

Operational Reporting can be defined as data that reflects current activity and supports the day-to-day operations of your business. At InfoSync we extract the data from any of your systems including Point of Sale, Back of House, and other 3rd party platforms. Our operational reporting includes Labor and Cost, Speed of Service, Menu Mix, Ticket Level Detail, Loss Prevention, and more.

InfoSync delivers operational reports through our RightViewWeb web-based portal. All users are given a unique set of credentials and secure access based on their role. User access can be limited to specific stores and reports if desired. In addition, users can schedule reports to be delivered via email.

BUSINESS INTELLIGENCE SOLUTIONS

Business Intelligence can be defined as a technology-driven solution that transforms data from multiple systems into actionable insight and presents it into a single reporting environment. Business Intelligence allows users to easily understand and digest business data by viewing reports, summaries, dashboards, graphs, charts, and maps.

InfoSync offers customized Business Intelligence solutions for all of our clients based on the data we extract from a variety of sources. Current InfoSync customers are using BI to consolidate data from our Finance, Payroll, and Operational Reportings systems so they can see the “big picture” without taking the time to manually pull and sort the information.

Our Business Intelligence solution is based on the Microsoft Power BI suite of products. InfoSync also offers custom data warehouse hosting where clients can build and deploy their own dashboards.

WHAT MAKES RIGHTVIEWWEB DIFFERENT FROM OTHER REPORTING PLATFORMS?

- InfoSync can consume data from many different systems and consolidate the results in a timely manner.
- InfoSync always customizes reports and dashboards for each client as there is no one set of reports that meets everyone's needs.
- InfoSync can apply each client's specific business logic to customized dashboards.
- For our full service accounting and payroll clients, users do not need to manage a separate login.

HOW OPERATIONAL REPORTING AND BI BENEFIT YOU

See trends and adjust accordingly

- Gives you the power to understand sales trends and growth so you can adjust to the market's needs. BI offers visual metrics allowing anyone to see trends and make decisions, even without a background in accounting or finance.

Eliminate Inefficiencies

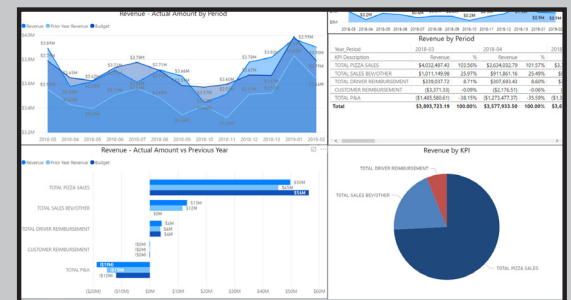

- With RightViewWeb and Power BI, you can easily pinpoint processes that are underperforming and adjust accordingly. Monitoring sales trends becomes simple and outcomes are easier to forecast based on those trends over time.

All of your data in one location

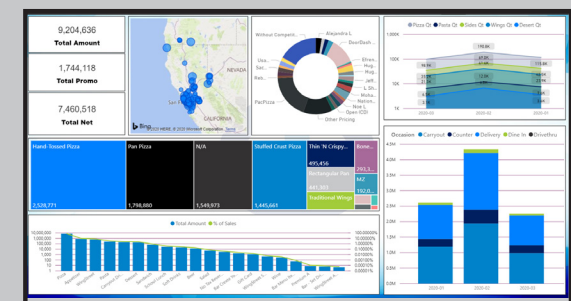

- How much valuable time have you spent digging through individual reports from your company to get the bigger picture? InfoSync pulls the data from your stores and our own finance, payroll, and reporting systems and delivers it to your fingertips. You can see how your company is doing as a whole as well as drill down to location specific details. This will allow you to see what is selling the best in certain areas, how location impacts customer behavior, which stores are most profitable, and more. If you have the information to make better business decisions you can begin to have a positive impact on your bottom line and drive your business forward.
